(929) 338-9104 | uafnan92004@gmail.com | github.com/afnanuddin1

EDUCATION

CUNY Queens College, Queens, NY
Bachelor of Arts in Computer Science

December 2026

EXPERIENCE

Full-Stack Developer

Mar 2026 — Present

Rellia — Real Estate Transaction Platform

- Built a full-stack real estate transaction coordination platform using Next.js (App Router), TypeScript, Supabase (Postgres + RLS), and Tailwind CSS to orchestrate 25-step residential transactions across sellers, buyers, attorneys, title agents, lenders, and inspectors
- Engineered a state machine-driven workflow with 9 discrete statuses (Draft Listing → Closed & Recorded), enforcing legal and financial compliance rules across all parties and transitions
- Designed a Stripe payment integration with webhook handling, enforcing strict separation of platform fees from escrow/settlement funds in compliance with IOLA and RESPA requirements
- Resolved 16 security audit findings across the API layer, including IDOR vulnerabilities, missing Row-Level Security policies, XSS in email templates, and auth checks on the image proxy

Front End Manager

Aug 2023 — Present

Food Emporium

- Led training and supervision of a 4-person cashier and clerk team, improving checkout efficiency and boosting customer satisfaction through standardized procedures and targeted coaching
- Optimized checkout throughput, reducing average checkout time and lowering cart abandonment, by streamlining front-end workflows and centralizing cross-functional team communication

PROJECTS

Intelligent SQL Copilot | Python, FastAPI, PostgreSQL, Redis, React, Docker

- Developed an AI-powered SQL assistant that reduced analyst query development time by ~70% and cut erroneous queries by 40%, by converting natural language to optimized PostgreSQL queries using schema-aware prompt engineering and validating on a 2,500+ record, 6-table flight database
- Implemented a query-analysis pipeline that reduced redundant AI calls by 60% and accelerated index-recommendation turnaround by 30%, by parsing EXPLAIN ANALYZE to detect sequential scans and leveraging a Redis cache to generate automated index suggestions

Airbnb Price Prediction App | Python, Pandas, Scikit-learn, Streamlit, SQLite

- Implemented end-to-end ML pipeline to predict nightly Airbnb prices, reducing mean absolute pricing error ~20% and cutting deployment time by 50% through automated ETL, feature engineering, hyperparameter tuning, and containerized model serving
- Implemented a random forest regression model, improving listing price-prediction accuracy by 18% (reducing MAE by \$12) by engineering and training on neighborhood, room-type, and amenity features

Spam Email Detector | Python, scikit-learn

- Implemented a machine-learning classifier that achieved 98% accuracy and a 0.94 F1-score on the UCI SMS Spam dataset by engineering feature pipelines and tuning ensemble models to distinguish spam from ham
- Implemented TF-IDF vectorization and evaluated Naive Bayes vs. logistic regression, improving classification accuracy ~10% by tuning hyperparameters with GridSearchCV

SKILLS

Programming Languages: Java, Python, C/C++, SQL, JavaScript, HTML/CSS, MIPS Assembly, TypeScript

Frameworks & Libraries: FastAPI, Spring Boot, React, Next.js, SQLAlchemy, Pydantic, scikit-learn, Streamlit, Node.js, Tailwind CSS

Databases: PostgreSQL, Redis, SQLite, MySQL, Supabase

Tools & Platforms: Docker Compose, Git, REST APIs, nginx, Stripe, Prompt Engineering
